

DEVARAKONDA RAKESH

Full Stack Developer | Backend Developer

Hyderabad, India | rakeshdevarakonda2000@gmail.com | +91 9515147103 | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Backend-focused Full Stack Developer with hands-on production experience building event-driven, multi-tenant systems on the MERN stack, Node.js, and Go. Comfortable across RBAC-driven security design, real-time WebSocket infrastructure, and AWS. Also builds and publishes independent tools, including an open-source npm package used by other developers.

CORE SKILLS

Languages: JavaScript, Python, Go

Frontend: React.js, Next.js, Redux, React Query, HTML5, CSS3, Bootstrap

Backend: Node.js, Express.js, Go (Gin), REST API, WebSockets

Databases: MongoDB, PostgreSQL, MySQL, Redis

Cloud & DevOps: AWS, Docker, GitHub Actions, CI/CD

Testing & Tools: Jest, Supertest, Postman, Git, GitHub

WORK EXPERIENCE

Backend Developer — Narrative Intelligence Private Limited

Sep 2025 – Present

- Architected a multi-workspace backend with granular Role-Based Access Control (RBAC) and strict tenant data isolation, enabling secure cross-team collaboration across 10+ workspaces.
- Engineered serverless, event-driven data pipelines using AWS SQS, Lambda, and EventBridge, increasing system throughput by ~80% and cutting infrastructure overhead by ~40%.
- Built backend microservices in Go (Gin) alongside the core Node.js/Express stack, extending the team's service architecture to support workloads better suited to a compiled, concurrent runtime.
- Implemented OAuth 2.0 authentication flows for Gmail, Google Calendar, Microsoft Outlook, Slack, and Notion, enabling scalable third-party data synchronization across multiple providers.
- Deployed WebSocket-based speech-to-text streaming infrastructure, delivering real-time transcription with sub-100ms latency for live collaboration features.
- Built a real-time browser sync engine for browsing history and bookmarks, and a full-stack email inbox application (inspired by Notion Mail and Superhuman) with REST and WebSocket-based sync.
- Designed a secure password manager backend with encrypted credential storage and retrieval.
- Optimized React.js application performance through lazy loading, code splitting, and CDN delivery, reducing redundant API calls by 20%.

PERSONAL PROJECTS

Mongo-DataLayer (npm package) — Node.js, MongoDB

- Published a zero-boilerplate MongoDB data abstraction layer with 1,000+ downloads, featuring singleton connection management, full CRUD, cursor-based pagination, and query builders.
- Built audit capabilities including field-level change detection, document snapshot restoration, and automated audit log generation.

Task Management System — Go, Gin, PostgreSQL, JWT, sqlx

- Designed a multi-tenant task management API with hierarchical RBAC (super_admin / admin / member) and a governed task lifecycle enforced via a strict state machine (todo → in_progress → submitted → completed).
- Implemented a dual-token authentication system using JWT access tokens and AES-GCM-encrypted refresh tokens with automatic rotation, backed by a normalized PostgreSQL schema and rate-limiting middleware.

CMS Platform — Node.js, Express.js, MongoDB, REST API

- Developed a modular, headless CMS with RESTful APIs supporting dynamic content schemas, streamlining content authoring, versioning, and retrieval workflows.
- Enforced RBAC at the API layer and applied MongoDB indexing strategies to improve query performance.

Video Progress Tracker — Node.js, Express.js, MongoDB

- Built a stateful video-tracking service persisting granular watch-history records, enabling cross-session resume playback.
- Designed API endpoints and data models to handle real-time progress ingestion under concurrent load.

EDUCATION

B.Tech, Electrical & Electronics Engineering (EEE) — Vageswari College of Engineering, 2018 – 2022

Intermediate (12th) — Sri Kakathiya Junior College, 2016 – 2018

Secondary School (10th) — Ushodaya High School, 2016
